

2017-2018 WINNER FOR INNOVATION IN SUSTAINABLE ACCOMMODATION

www.PassivPod.co.uk

Referral Rewards for Property Developers and Friends who introduce us to buyers

We believe that property developers or friends of property owners are a trusted source for referrals for our unique range of quality accommodation. Our referrers can register their leads with their personal contacts of interested private landowners or develop new leads with their own marketing to schools or land owners such as park lodge operators

We offer a wealth of supportive information for customers and referrers and our website content is highly educational for specific markets, buyers and investors.

At present we are registering written letters of interest from those who are interested in principle to buy PassivPods, subject to contractual terms being agreed. These written expressions of interest carry no obligations, financially or otherwise.

It is important that all third party marketing of our brand is planned in liaison with ourselves to ensure potential customers receive the right information at all times.

We plan to raise equity investment funds for our initial "showcase" classroom and garden office builds as shown on our website. These initial showcases will then be used as case studies to demonstrate our quality and customer feedback. You can see examples of our eco-designs [here](#).

We have different levels of introducers and rewards varying from 2% for a first level qualified prospect up to 5% for a qualified prospect with evidence of funds and commitment. Our flexible reward system of 2% to 5% applies to all unit sales from £33K to £500k. We pay referrers on receipt of customer funds for pre-registered qualified leads. We also pay 5% commission on receipt of equity investment funds.

We have the skills in-house with our partners at [Koru Architects](#) to manage planning, build and completion. Our home garden pod does not always need planning consent, ensuring faster hassle-free sales. Zero-carbon timber modules built offsite guarantees fast onsite installation with minimal onsite waste, minimum disruption, and fewer environmental objections.

If you'd like to discuss becoming a registered referrer let's chat and discuss options. We welcome your support promoting our unique range of healthy biophilic buildings.

Thanks! Clive Bonny
